## BABY MIRACLES

Six days a week, all through Vineseed harvest the small harvester pictured is busy harvesting our stock seed plots.

One of three sister machines (one at our Rocky Ford, Colorado plant, one at Gridley, Calif., and a third at Modesto), it has earned the nickname "Baby Miracle", because it has so effectively simplified and made more fool-proof the harvest of stock seed plots for the some 200 varieties which our firm annually produces.

Very mobile, they can be swiftly moved from crop to crop. By virtue of special design and small size, positive cleanup is but a matter of minutes and absolutely foolproof. The "brainstorm" of Mr. L.R. Robinson Sr., they were built in our own shops and are the only ones of their kind in the industry.

We feel that this machine is due much credit for the uniformity and excellence evident today in our VINESEED varieties.

## COMMENT

200 GALLONS A MINUTE

The moment a harvester cuts into a fruit of any vine seed variety and allows air to reach the seed, a deterioration in the enamel (hence the marketable appearance of this seed begins.

The time interval between harvest and drying of the seed, therefore, is a matter of great importance in the newer, more modern techniques now used in Vine seed production.

The machine pictured is a seed washer designed and built in our Modesto Shop. One of several we use in washing our seeds, it is a vital step in the harvest program.

This design is unique in that it automatically screens out chunks of rind and flesh which might discolor seed during the drying process, and also scrubs and polishes the seed with rubber scrubbers. AND does it all in a constant bath of clean water entering the machine at the rate of 200 gallons each minute.

This is another example of the care and thought in every step of our production program, for insuring that the seeds you supply your dealers are of prime quality and of fine appearance.
